**Battery Watering
Made Easy!**

Fast

Snap on / snap off water connections and fast filling turn the often ignored task of maintaining electrolyte level into a simple, enjoyable task. . .one more likely to get done on a regular basis.

Calculate your labor savings using the Cost Justification Worksheet on our website. After installing your Pro-Fill system you will realize other cost benefits including extended battery life, no more corrosion damage to vehicles and floors, as well as a higher vehicle resale value.

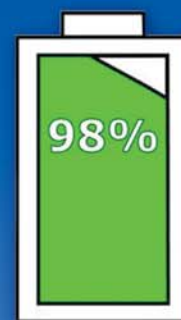

Safe

Fill batteries without ever having to remove the vent covers again. Avoid battery acid burns, ruined clothing and noxious fumes. Each

Pro-Fill valve includes built in flame arrestor (inside the de-gas chamber) to prevent ignition of flammable battery cell gasses as they leave the battery. Simply put, Pro-Fill is the safest way to water your batteries.

Reliable

When you fill your battery with a Pro-Fill watering system, you know that it's filled to the correct level every time. A properly watered battery last longer and performs better. Overfilling a battery results in loss of acid, while charging with low electrolytes will result in permanent damage to the lead plates. Both will result in loss of capacity and life expectancy.
